Research at the University of Oregon continues to inspire innovations. In fiscal year 2014, UO research resulted in new spinoff companies, the filing of 25 US patent applications, and a total reinvestment of $6.3 million to academic units, innovators, and the state of Oregon.

The UO is working to generate even more startups through the Oregon Regional Accelerator and Innovation Network (RAIN), which launched last year and supports new technology companies in the south Willamette Valley.

RAIN is a partnership that

• unites entrepreneurs, businesses, communities, local and state governments, and higher education to foster economic growth and innovation
• generates new jobs, trains students, and connects entrepreneurs to mentors and resources
• provides access to high-tech research facilities where new companies can develop their products
